Data Overview:
Predicting Future Springs

A. K. Ettinger, E. M. Wolkovich & the Predicting Future Springs Working Group

March 21, 2016

1 Overview of the phenological data

There are two main files with the phenological data. They can both be downloaded from `https://github.com/AileneKane/radcliffe`.

1.1 Experimental data

We'll walk through the experimental datafile first. Repeat what's below for the observational data ....

```
> head(expdata)
```

```
     site plot event year genus species doy
1 marchin    1   bbd 2011  Acer  rubrum  88
2 marchin    1   bbd 2011  Acer  rubrum  83
3 marchin    1   bbd 2011  Acer  rubrum  96
4 marchin    1   bbd 2011  Acer  rubrum  79
5 marchin    1   bbd 2011  Acer  rubrum  83
6 marchin    1   bbd 2011  Acer  rubrum  80
```

1.2 Observational data

Next, the observational data. Here we explain what each column means ....

```
> head(obsdata)
```

```
    site plot event year doy       date genus   species scrub varetc cult
1 fitter <NA>   ffd 1954 130 1954-05-10  Acer campestre     0     NA   NA
2 fitter <NA>   ffd 1955 131 1955-05-11  Acer campestre     0     NA   NA
3 fitter <NA>   ffd 1956 137 1956-05-16  Acer campestre     0     NA   NA
4 fitter <NA>   ffd 1957 121 1957-05-01  Acer campestre     0     NA   NA
5 fitter <NA>   ffd 1958 128 1958-05-08  Acer campestre     0     NA   NA
6 fitter <NA>   ffd 1959 129 1959-05-09  Acer campestre     0     NA   NA
```

Figure S1: Mean day of year (averaged across all events and species) by year from the observational data.

Then we could discuss the sites, and the phenological events ...

```
> unique(obsdata$site)
```

```
